

# Modern Workplace

Transform workplace productivity with intelligent apps

Upgrading the employee desktop infrastructure can be too expensive and take too long. Simplifying desktop infrastructure via cloud services helps the business integrate old technology with new cloud services while continuing to run your business. Empower employees, enhance collaboration, and gain simple access to all your apps all within a single and secure solution.

## What is a Modern Workplace?

We understand the transition to a modern workplace solution can be daunting. We can help you integrate Office 365, Enterprise Mobility and Security, and Windows 10 into your business while offering you ongoing support and managed care. Our modern workplace solution provides your business a single platform for chat, meetings, file sharing, and so much more—while offering unmatched security and seamless integration capabilities.

### Microsoft 365

Microsoft 365 combines best-in-class productivity apps with intelligent cloud services to transform the way you work. Connected experiences improve productivity and integrated workflows transform how you manage your business.

### Teams

Teams solves the problem of fragmented communication solutions and the lack of functionality across a multitude of devices. Most communications platforms are incredibly complicated, expensive, and unreliable—Teams is the answer.

### Outlook

Work efficiently with email, calendar, contacts, tasks, and more—together in one place. Office 365 integration lets you share attachments right from OneDrive, access contacts, schedule Teams meetings, and view LinkedIn profiles.

## Enterprise Mobility & Security

Today's workforce is highly mobile and business is conducted from almost anywhere, at any time. For businesses to be competitive, they need their employees to be productive on-the-go while keeping company data secure.

With the right modern workplace solution, users can work anywhere with complete access to their apps—like Microsoft Office 365—and the data they need to be productive. Deliver all of this while giving IT peace of mind with tools that help secure company data.

## Our Solution

We set your business up for success with an up-to-date, secure, and easy-to-manage modern workplace solution that your employees can access with ease. We also help you step back and think holistically about your data, data protection, and security requirements.

## Opportunities to Modernize

### Teams + Productivity

More and more businesses are migrating from Skype for Business to Microsoft Teams to rapidly expedite collaboration. Administrators save time with one solution that is easy to setup and provide to new users. Teams drastically boosts employee and team productivity from any device, and on one platform.

- Teams is the single pane of glass in the enterprise for collaboration, content, and communication, and enables integration to many common services.
- Reduce your on-prem footprint for email and collaboration by moving to O365. We handle deployment, customization, integration, and governance.

### Intelligent Security

Features like single sign on, conditional access, and self-service options enable you to provide consistent data protection on-prem and in the cloud, establish security controls, and gain visibility over all your devices and apps.

- Manage your BYOD or mobile workforce while keeping company data safe from phishing, malware, or company leaks

### Monitoring + Security

Are you looking to move to the cloud but aren't sure how to monitor it, scale it, control your costs, and keep your data safe? Cloud IaaS and PaaS services can typically lower operational costs by 20-30 percent, with security of cloud solutions demonstrably better than legacy on-prem strategies.
