

Returning to the Workplace: Bounce Back Better

Reopen responsibly, monitor intelligently, protect continuously

In the shadow of the pandemic, many organizations are looking to reopen and return to the workplace. But their needs have changed, and challenges continue to emerge. Organizations that navigate and succeed in this time of change need to be resilient and adapt quickly.

Strengthening business resilience during the ongoing pandemic means embracing digital technology and tools like Microsoft's Return to the Workplace solution, a turnkey set of applications that allow you to safely reopen workplaces and support employee and customer health, all while maintaining business continuity.

Demonstrate business continuity in challenging times

Make data-driven decisions
Ease decision making when it matters the most

Reopen and maintain safe work environments
Ease decision making when it matters the most

Create clarity for the workforce
Ensure employees and health leaders can easily follow guidelines

The Value for You

Take your business efficiency to the next level and reopen your workplace with confidence by effectively managing the end-to-end reopening process. The solution can help you:

- ✓ Ensure that office-based work remains a viable option for your business moving forward
- ✓ Gain comprehensive insight via powerful dashboards so you can make data-driven decisions when it matters most – to maintain safe work environments
- ✓ Reduce team member anxiety, providing them with the right tools to make the transition easy and at the same time ensure their care and wellbeing
- ✓ Manage multiple locations simultaneously with location readiness and safety monitoring tools for facility managers

Everyone Benefits

Equip Facility Managers

Make informed decisions to safely reopen locations

Employees

Return confidently with self-service tools for working safely and productively

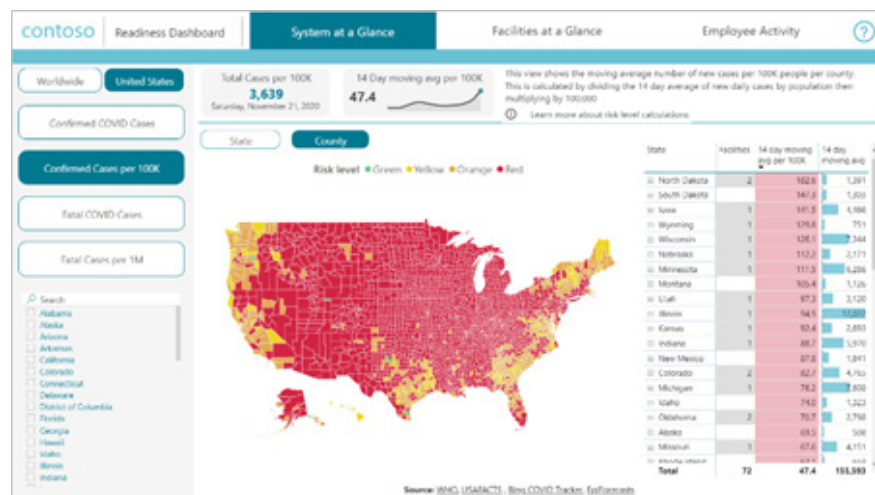

Health and safety leaders

Ensure the care and well-being of your workforce

Building Blocks of Return to the Workplace

Location Readiness dashboard

Integrate insights from your own data and global sources to efficiently manage a safe reopening with clear and easy access to your facilities' state of readiness. Facility managers and task force leaders can track return phases, readiness tasks, and occupancy rates across facilities globally, and pair that information with critical factors like COVID-19 infection rates and the availability of supplies.

Facility Safety management

The goal is to safely reopen facilities, and the Facility Safety Management app provides step-by-step instructions to do just that with the help of an automated checklist. You can track status at a detailed level that includes occupancy, health supplies, safety procedures, and more — all providing a holistic view of readiness status. You can even track specific areas within each location.

Workplace Care management

Get the insight and tools to actively manage COVID-19 cases, and track progress of employees who might have been exposed to COVID-19. The Workplace Care Management app and dashboard allows you to monitor employee needs, necessary time lengths for restricted building access, and more. Other options include identifying hot spot locations for safety improvement and importing data from external systems to support case management and manual contact tracing.

Employee Return to the Workplace mobile app and portal

Empower your workforce with the self-service tools that they need to feel confident about returning to work and remaining productive while onsite. The employee self-service app includes a mobile solution that allows authenticated employees to check in and self-screen before entering a building via mobile device. Employees can rest assured their safety is being prioritized and monitored by facilities personnel.

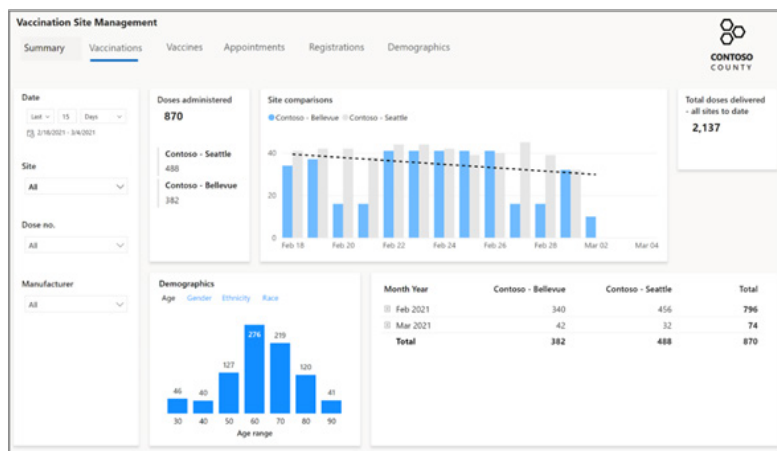

The portal offers many standard types of authentications, including the ability to restrict who can access the portal. Contractors, vendors, and other suppliers who need access to your facilities can use the portal to check in, without needing to be a Microsoft Azure Active Directory authenticated user.

A Power Platform app and portal offers your workforce the tools they need to feel confident about returning to the workplace and remain productive

Vaccine Attestation

With the evolving landscape involving vaccines, many organizations are struggling to develop a program to capture the vaccination status of employees and guests. The vaccine attestation power app provides a workflow-based experience for managing vaccine attestations and periodic testing, including vaccination dates, vaccination types and the option to upload copies of proof of vaccination. It can be customized as health guidelines shift over time, making it easier to quickly adapt to evolving global health trends and changing circumstances of the pandemic.

Get it Done Right

The Return to the Workplace solution requires a minimally established Power Platform in your Microsoft 365 tenant. In other words, you need an environment into which the solution can be deployed, users must be able to access it, and you must ensure that it's minimally managed and secured.

As we move forward in 2022, Hitachi Solutions can provide the direction and implementation expertise you need in two different options:

Quick Start

Hitachi Solutions' experts will install, configure, and deploy the separate Power applications, connecting all through the Common Data Service (CDS). We implement the pre-built Microsoft Power Platform solution using our tried-and-true methodology so you can quickly start seeing value.

Expanded Start

Hitachi Solutions' expert Power Platform team will implement the solution, and work with your organization to customize it for your individual needs. Using Power Apps, Power BI, and Power Automate, the expanded solution includes a gap-fit discovery workshop to review the out-of-the-box solution, and subsequent developmental and configuration changes to address your specific situation.

Safely and confidently return to the workplace with Microsoft's Power Platform and Hitachi Solutions technological expertise.
