

Data Security Engagement

Minimize cybersecurity risks with Hitachi Solutions and Microsoft

Engagement Highlights

Understand the risks of dark organizational data

Learn about the risks organizational insiders may impose

Assess your environment against key data protection standards

Receive deep analysis and detailed report on findings and associated risks

Understand the tools and services that can help mitigate risks

Explore tactical recommendations and next steps

Did you know:

- **20%** of data breaches are due to internal actors?
- The average cost of a data breach is **\$15.4M** when a malicious insider is involved?
- **83%** of organizations experience more than one data breach in their lifetime?

As our digital world continues to grow, so do the risks. Data leaks and theft might have been overshadowed by external threats in the past; however, they have become the common vulnerability organizations need to address today.

Detecting, investigating, and acting on data security risks in your organization is critical to ensuring trust, creating a safe workplace and protecting company assets and employee and customer privacy.

Hitachi Solutions and Microsoft are here to help you identify your data security risks and understand how to control them with a Data Security Engagement.

Engagement Overview

Having an integrated data approach that can help quickly identify, triage, and act on security risks is more important than ever. This Data Security Engagement will provide you with the insights and information you need to understand data security, privacy, and compliance risks in your organization.

Our cybersecurity experts will work with your technical team to run a Microsoft Data Security Check that offers:

- ✓ An understanding of the risks dark organizational data and organizational insiders pose
- ✓ The ability to monitor user behavior and communications for risky behavior
- ✓ An assessment of your current Microsoft 365 environment against key regulations and standards for data protection and general data governance
- ✓ Knowledge of state-of-the-art tools, like Microsoft Purview, you can use to mitigate data security risks
- ✓ A detailed report on all risk findings as well as recommendations and a roadmap of actionable next steps based on your needs and objectives

Why You Need a Data Security Check

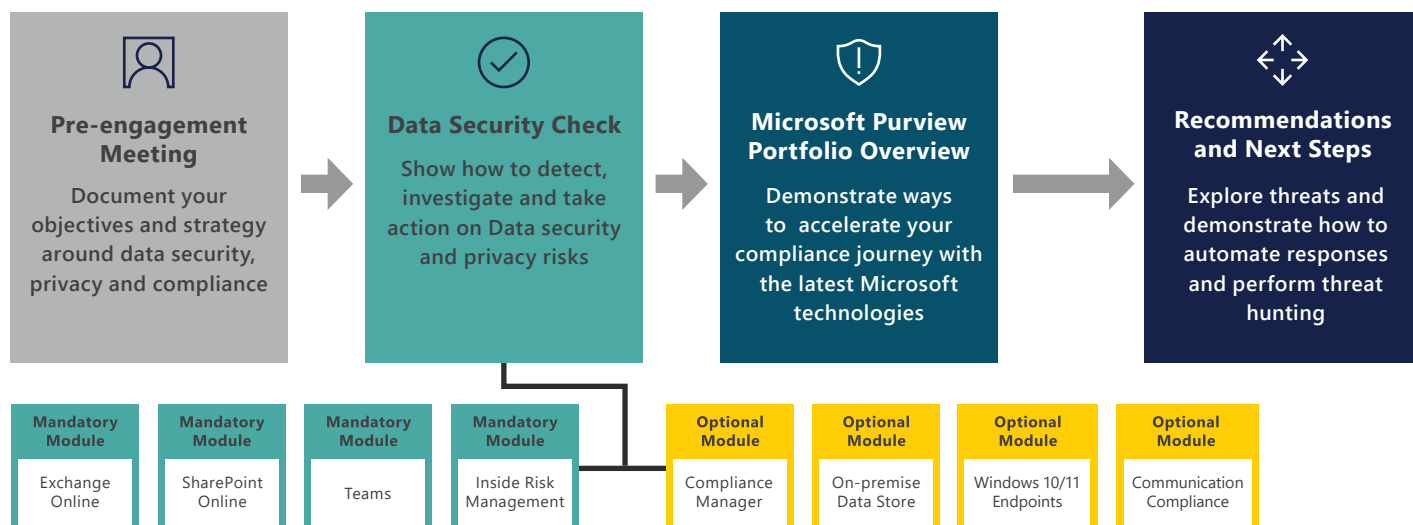

The Data Security Check is an integral part of the Data Security Engagement. It leverages Microsoft Purview tools and services to automatically:

- Analyze user behavior for events that impose a risk to your organization. These vulnerabilities range from loss of intellectual property to workplace harassment and more.
- Discover data that is stored in the Microsoft cloud and analyze it for the presence of artifacts that may impose data security risks.

The Data Security Check is structured around typical Microsoft 365 services. At its core, it analyzes user behavior and scans data repositories related to email, collaboration, and document storage. And optional modules can be added to include on-premises data repositories, Windows 10/11 endpoints, and more.

All activities share a common framework that allows you to understand the risks that exist and develop a roadmap to mitigate and protect company information.

What to Expect

Experts in Microsoft compliance will provide you with:

- A security check report that includes findings and insights from the automated discovery process
- A list of recommendations and actionable next steps to help mitigate identified risks
- Clear look into Microsoft's approach to data security and controlling risks
- Optional Compliance Manager Tenant Assessment report with suggestions and top key improvement actions
- Set of long-term recommendations for your compliance strategy

The Hitachi Solutions Advantage

At Hitachi Solutions, security isn't an afterthought — it's at the core of all we do. Our solutions and services are meticulously designed to bolster security, enhance performance, and boost reliability. Our experienced team is comprised of seasoned scientists and engineers with in-depth knowledge and experience in applying SEIM and other security solutions to the entire Microsoft technology stack.

As a long-time premier Microsoft partner, we're ready to apply our knowledge to ensure your end-to-end security environment is strong, effective, and future-proofed.

Schedule your data security check engagement today!
