

Microsoft Sentinel Engagement

Modernize your enterprise security environment with Hitachi Solutions and Microsoft

Engagement Highlights

Understand the features and benefits of Microsoft Sentinel

Gain visibility into threats across email, identity, and data

Be better prepared to understand, prioritize, and mitigate potential threats

Create a defined deployment roadmap based on your environment and goals

Develop joint plans and actionable next steps

As IT becomes more strategic, the importance of security grows daily. Security information and event management (SIEM) solutions built for yesterday's environments struggle to keep pace with today's challenges — let alone tomorrow's unforeseen risks.

That's why Microsoft developed Microsoft Sentinel, a fully cloud-native SIEM.

Microsoft Sentinel delivers intelligent security analytics and threat intelligence across the enterprise, providing a single solution for alert detection, threat visibility, proactive hunting, and threat response. It helps you see and stop threats before they cause harm.

Hitachi Solutions invites you to see Microsoft Sentinel in action with a customized Sentinel Engagement.

Engagement Overview

Our team of cybersecurity experts are on hand to tailor a two-day Microsoft Sentinel Engagement specifically for your organization. First, we'll meet with your team to assess and analyze your current environment, requirements, priorities, and goals. Then we'll work with you to:

- Discover threats to your Microsoft 365 cloud and on-prem environments across email, identity and data

- Learn how Microsoft 365 and Azure security tools can help mitigate and protect against threats
- Demonstrate how to automate responses and perform threat hunting
- Recommend next steps on how to proceed with a production implementation of Microsoft Sentinel

Choose The Best Approach For You

Every organization is different so this engagement can be customized for you. Depending on your environment, we have two workshop scenarios:

Remote Monitoring

If your organization doesn't have its own security operations center (SOC), or if you want to offload some monitoring tasks, we will demonstrate how Hitachi Solutions can perform remote monitoring and threat hunting for you. You'll discover attack indicators and learn about the benefits of a managed SIEM with a true cloud native SIEM.

Joint Threat Exploration

If your organization is interested in learning how to integrate Microsoft Sentinel into your existing SOC by replacing or augmenting an existing SIEM, we will work with your SecOps team and provide additional readiness to bring them up to speed. You'll receive hands-on experience on how to automate your security operations and make it more effective.

What to Expect

Analyze your requirements and priorities for a SIEM deployment

Define scope and deploy Microsoft Sentinel in your production environment

Remote monitoring* of Microsoft Sentinel incidents and proactive threat hunting to discover attack indicators
**optional component*

Explore threats and demonstrate how to automate responses and perform threat hunting

Recommend next steps on how to proceed with a production implementation of Microsoft Sentinel

The Hitachi Solutions Advantage

At Hitachi Solutions, security isn't an afterthought — it's at the core of all we do. Our solutions and services are meticulously designed to bolster security, enhance performance, and boost reliability. Our experienced team is comprised of seasoned scientists and engineers with in-depth knowledge and experience in applying SEIM and other security solutions to the entire Microsoft technology stack.

As a long-time premier Microsoft partner, we're ready to apply our knowledge to ensure your end-to-end security environment is strong, effective, and future-proofed. And we not only deliver the technology, we are also able to provide the advice and support required for adoption, compliance, and impactful change.
