Microsoft Fabric Real-Time Intelligence

2 - 4 Week Proof of Concept

CONTACT US today to get started!

PoC Overview

Unlock the power of real-time analytics with Hitachi Solutions **Fabric Real-Time Intelligence Proof of Concept (PoC)**. This engagement helps organizations harness Microsoft Fabric's Real-Time Intelligence capabilities to capture, process, analyze, and act on streaming data.

Our PoC includes hands-on implementation, use case validation, and integration with your data sources to deliver real-time dashboards, anomaly detection, and automated actions. We guide your team through the best practices of real-time event processing to maximize the impact of your data.

Why Take Action?

Lacking **real-time visibility** into critical business operations? Difficulty in integrating **streaming data sources**? Challenges in automating **real-time decision-making**?

Our **Microsoft Fabric Real-Time Intelligence PoC** will help you:

- Gain instant visibility into your most critical operational data.
- Trigger workflows based on real-time conditions.
- Visualize live data for improved decision-making.
- Connect to existing Azure and Microsoft 365 services.
- Built on Microsoft Fabric's powerful architecture

Outcomes

As a **Microsoft Preferred Fabric Partner**, we have deep expertise in Microsoft Fabric and Microsoft Azure and a **proven track record** of delivering real-time analytics solutions.

Our team will provide best practices of **real-time event processing**.

During the PoC, we will guide you through:

- Clear understanding of how to implement real-time analytics in Fabric
- Working prototype demonstrating streaming data insights
- Improved operational efficiency through real-time monitoring
- Roadmap for scaling real-time intelligence solutions
