

Understanding the language behind the “New Era of AI”

Next-generation services can quickly transform your data into intelligence, but unfortunately it does not come with a secret decoder ring. Luckily, our Hitachi Solutions team of data, AI, security, and business advisors are helping customers crack the code to understanding complex data.

From best-in-class databases, analytics, and AI, to governance and security, all things data continue to drive digital transformation initiatives across companies large and small. Hitachi Solutions provides our customers with a broad array of solutions — from unified, modern Azure-based data platforms to turnkey, SaaS-based models that reduce development and capital costs — to help you turn data into predictive and analytical power.

Crack the code for your business with Microsoft Fabric

“Platform” — has somewhat become a commercialized term, however, with Microsoft Fabric, we are entering into a new realm where all the components truly are delivered in a complete, integrated, single offering for end-to-end analytics.

“OneLake” — not to get too deep into tech-speak, becomes the true hub-and-spoke data mesh for your organization. Azure Data Lake includes all the capabilities required to make it easy to store data of any size, shape, and speed, and do all types of processing and analytics across platforms and languages.

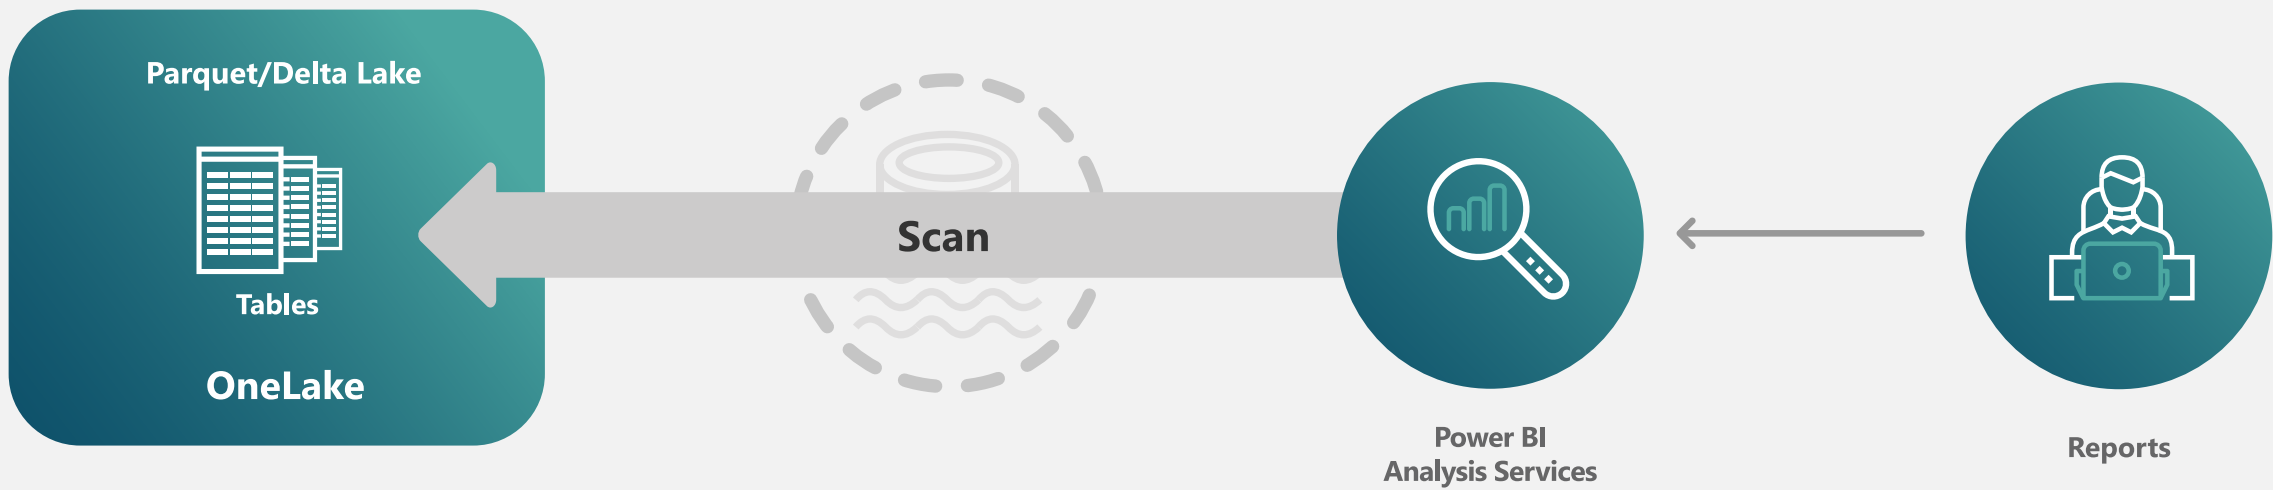

“Unified” — always an aspiration of any business, can now be more easily achieved with Microsoft Fabric’s modern data warehouse approach, providing a robust set of features and capabilities to support collaboration, sharing, and analysis to support the business through a fully interactive query experience. AKA: Faster time to value and consumption of your data.

“End-to-end” — yet another often used term, will become known for Microsoft Fabric’s ability to embrace all the many elements, starting with all the tech, the security, the governance, through to how a business user consumes information to perform their job day-to-day – again, a complete, single offering.

Microsoft Fabric The data platform for the era of AI

Microsoft Fabric, or for fun, “See-through Mode” - Sounds new-age, doesn’t it? In simplistic terms, the reason this is so cool is because technology is now available to truly stream data in real time – data that is constantly refreshed to make your reporting more accurate and up to date. [It’s been a journey](#), remember the “real-time” data access that was real-time, but slow; then the faster, but latent and duplicative leg of the journey; to next up – the perfect combination of quick and secure accessibility.

Our team of experts, who have been working alongside Microsoft in private preview, have gained a deep understanding of Microsoft Fabric through our involvement in developing and testing the platform. That experience, combined with our deep expertise in data warehouse technologies, combined with our Microsoft focus is **how** we are well positioned to help you harness the possibilities for your business.

But even more exciting is how we’re helping customers [GET STARTED NOW!](#)

It’s not difficult to see how Microsoft Fabric is a game changer. **What may be less clear is how it can accelerate your data journey.** Microsoft Fabric is not yet generally available, but waiting will put you further behind in reaching your potential.
