Offer: Microsoft Power Platform | Digital Factory Assessment

Overview

Identify business areas / processes with the highest probability of positive, immediate financial impact through the application of technology. Assess and prioritize current application development and automation projects likely to have the greatest immediate financial impact.

If you have a backlog of applications and automations that would increase your organization's efficiency and are ready to investigate the Microsoft Power Platform as a potential accelerator to get you there, start with Hitachi Solutions' Digital Factory assessment.

1 Day

No Cost for approved engagements

Why Take Action?

- Get the applications and automations you know need to drive efficiency but lack the time or resources to create.
- Innovate quickly and start to make incremental changes based on a well-defined roadmap.
- Maintain cost control of your roadmap and backlog, approving projects — if and when — it works for you.

Outcomes

- An assessment for enterprise industries focused on capturing ongoing application and automation needs based on the Power Platform that includes an executive summary analysis outlining your next steps.
- How does this support “you”? This approach ensures average cost of application development is reduced and time to value is increased.

Explore an ongoing, iterative approach to Power Platform development with Hitachi Solutions.
