Hitachi Solutions

Proactive Security: Cyber Threat Defense

2-Week POC

CONTACT US today to get started!

Overview

Strengthen your defenses and streamline your security operations with Hitachi Solutions' strategic 2-Week POC. We'll help your organization transition from a **reactive to a proactive security stance**, utilizing our expertise to guide you through the complex and ever-evolving cybersecurity landscape, leveraging Microsoft's powerful security solutions.

We will help you formulate **a customized action plan** that aligns with your unique security objectives, regulatory compliance requirements, and operational efficiency goals. This holistic approach also **considers cost management**, leading to a comprehensive, **future-oriented strategy.** Post POC, you can expect **improved threat detection and response**, comprehensive **visibility of your security landscape**, and a **proactive security posture** that significantly reduces operational burdens.

Our goal isn't just about securing your systems today but fortifying them for the future. Equip your organization with the ability to anticipate and neutralize threats before they harm your business leveraging Microsoft Defender for Endpoint, Microsoft Defender for Identity, and Microsoft Sentinel.

Why Take Action?

Feeling overwhelmed by complex security threats? Need to optimize your cybersecurity resources? Consider our 2-Week POC if you are grappling with:

- **Alert Overload**: Struggling to prioritize and respond to numerous security alerts.
- **Visibility Gaps**: Lacking real-time threat visibility across domains like email, identity, and data.
- **Security Posture Concerns**: Unsure of how to improve your overall security posture.
- **Regulatory Compliance**: Navigating evolving cybersecurity laws and regulations.

Microsoft's combined security information and event management (SIEM) and extended detection and response (XDR) solution enables SecOps teams to detect, investigate, respond to, and defend against threats with a fully integrated and comprehensive set of capabilities.

With the combination of SIEM and XDR, your security team is armed with more context and automation and is empowered to stop threats faster, before there's a breach. Plus, organizations save up to 60% by using Microsoft Security rather than multiple point solutions.

Outcomes

Upon the completion of our 2-Week POC, your organization can anticipate a transformation of your cybersecurity stance. Here's what you can expect:

- **Unified Security View**: Use Microsoft Sentinel's data collection to gain a comprehensive, consolidated perspective of your security landscape.
- **Proactive Security Posture**: Shift from a reactive to proactive security stance, addressing threats before they cause damage.
- **Improved Compliance and Governance**: Meet compliance requirements and enhance cybersecurity governance with robust reporting tools.
- **Cost Management**: Consolidate security functions into a unified suite, reducing costs associated with managing multiple solutions.
- **Optimized User Experience**: Minimize disruptions, enhance productivity with seamless, unobtrusive security solutions.

You will receive:

- Workshop Summary Insights
- Experience hands-on proof of Microsoft's security solutions
- A roadmap for your production rollout and Managed Security Services

With this POC, secure your enterprise today, and future-proof it for tomorrow.
